Gastronomy professionals are searching for glasses that satisfy their needs in terms of **perfection and sophistication**.

Their desire: Splendidly elegant table settings with **fine, lightweight, extremely transparent** products.

Their professional needs: **Intensive daily use** requires products that are **highly resistant to shocks and detergents**.

To meet these twin challenges of **aesthetic excellence and resistance**, the Arc Research Centre is introducing a **new generation of lead-free crystal: Krysta**; The high-performance crystal glass.

SUPERIOR STRENGTH

The Arc Research Centre has developed a crystalline material, Krysta, combining **superior strength with exceptional finesse**.

Finer and stronger: the Krysta innovation.

With a thickness of 1.1 mm at the rim, KRYSTA is 30% stronger*

- **Savings across the entire chain: fewer breakages and chipping during transportation, storage, washing and polishing.**

*than other standard crystal glasses on the market.

COMPLETE TRANSPARENCY

Krysta is one of the **purest and most transparent crystal glass** on the market.

The perfect mastery of its composition, the quality of the sand used, and fusion at a very high temperature gives Krysta perfect transparency.

- **Tables enhanced by the sparkle of Krysta.**
- **The visual aspects of every wine respected to perfection.**

LONGLASTING BRILLIANCE

Krysta boasts extreme, long-lasting brilliance.

After 2,000 professional dishwasher cycles, Krysta is **as brilliant and transparent as ever**.

HIGH - TRANSPARENCY

Glass in its purest form Arcoroc has the «**High Transparency - Purity certified glass**» label on some of its products, this certifies that these items are made with only **the highest quality glass**.

Due to its composition and laboratory-tested and confirmed performance, Arcoroc glassware features an exceptional level of purity**.

**Quality certified by the IWA 8/AFNOR CLEAR GLASS STANDARD

For professionals, breakage problems are a regular occurrence. **In order to increase the lifetime of product by 10 to 50 times, in 1958, our research and development center developed and perfected since then, a technical process known as «tempering».** This process provides products with excellent resistance to heat and mechanical shock. Our items are fully tempered.

Savings in terms of budget and restocking costs: a tempered glass can be up to 5 times more resistant than an item that has not undergone any specific treatment process.

Tempered products resist to temperature variations till 130 °C: they can thus be removed from the oven (or from a salamander) and placed directly in cold water without the risk of breakage.

Completely safe for table service*: when a shock or series of shocks manage to rupture the exterior shell of the tempered glass, the resulting glass shards are not sharp to the touch*. *According to the thickness. Cannot be applied to tempered Opal.

CONTROLLED WEIGHT

Catering professionals are increasingly offering a pricing range that varies according to the weight of the food that their customers take. To ensure that it is as fair as possible, they need products the weight of which does not vary or varies only slightly from one item to another.

This is where Arcoroc™ comes in, **by controlling the weight of its items**, whether the products are made from Zenix™, Opal or glass.

Within our Arcoroc™ offer, for certain references that are strategic for the venue, **we guarantee a tolerated weight standard** according to the following rule:

- +/- 10 g for items weighing <= 500 g
- +/-15 g for items weighing > 500 g
